

# Thin-wall PC Injection Key-top

CoActive KDM Thin-wall PC Injection key-top solutions help minimize the handset thickness and gives an advanced cosmetic appearance.

Design options include a high variety of colors, textures, detailed embossed features and finishing. It provides advanced decoration options giving a cost effective high tech solution

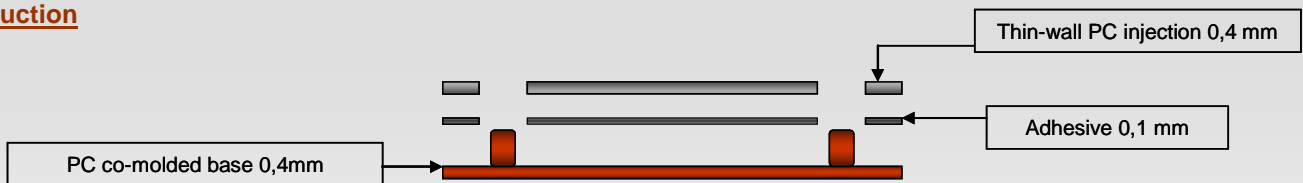

## Product Features

The thin wall keypad enables multiple colors and textures with metallic options and graphic effects. As such, it's a low cost alternative to metal keypads, without metal technical drawbacks.

This ultra slim keypad solution provides a PC key-top thickness of 0.4mm with excellent keypad definition and positive finger location.

## Construction

## Customer Benefits

CoActive KDM Thin-wall PC injection key-top solution provides the benefits of much more expensive solutions:

- Excellent aesthetic appeals with variety of decoration finishes, textures and colors in 3D effects.
- Ultra slim thickness.
- Embossed blind dot and artwork.
- Life time abrasion protection
- Supreme durability surface coating hardness up to 1H

## Market Opportunities

CoActive KDM offers Thin-wall PC injection key-top solution to any applications including wireless handsets where an ultra slim solution with strong aesthetic appeal is a priority.
